

Continuous Centrifuge

Konti Evolution Series

General Specifications:

- Application in the cane and beet sugar industries.
- It has two areas for molasses separation, which are used either to decrease its purity and / or to wash sugar.
- The monitor has an easy-open top cover that allows simple access to the entire centrifuge rotating assembly. It also has a small cover that allows easy screen segments replacement.
- Allows greater efficiency in the centrifugal operation.
- Vertical design composed of a cylindrical monitor.
- Basket: Made of duplex stainless steel.
- Crankcase: Composed of grease lubricated bearings, ensuring long service life. Special rubber bumpers between the monitor and base ensure minimal vibration.
- Drive: three-phase belt drive motor.
- Washing: with water and steam through spray nozzle system.
- Optional: Vibration sensor, Bearing temperature sensor, Emergency brake.
