

Rotary Scaling Drum Dryer

Description:

- Used for general drying and recommended mainly for heat-sensitive products processed in the chemical, food and sugar and alcohol industries.
- Single drum rotary dryer with casing or hood, with endless thread or chute for product discharge.
- Driven through an electric motor controlled by a frequency inverter, gear-type speed reducer, anchor bolts and a steam heating tray.
- Drying is carried out in heat-transferred heated drum through the inner walls of the cylinder to a thin layer of wet product adhered to the surface.
- After removing moisture, the dry product layer is separated from the drum by means of a scraper blade.
