

Horizontal Vacuum Belt Filter

Our Horizontal Vacuum Belt Filter is used in the treatment of sugarcane juices. It executes a continuous recovery of the sugars present in the cachaça (mud) originated on the decantation stage.

Benefits:

- Our highly reliable equipment requires low maintenance costs, consequently ensuring in a responsible and economical way, its economical and efficient performance.

Technical Specifications:

- Capacity: 12.000 tons per day (TCD)
- Length: 12.000 mm
- Width: 2.700 mm
- Height: 2.500 mm

Technical Characteristics:

- High filtration efficiency
- Larger vacuum area
- Lower POL concentration on the cake
- Lower water consumption
